ABSTRACT

This report compares Alabama's reading and mathematics performance on the most recent administrations of the state assessment with performance on the National Assessment of Educational Progress (NAEP). To indicate how Alabama is doing in narrowing the academic achievement gap between African American, Latino, or low-income students and their white, middle class peers, the report presents NAEP data by race, ethnicity, and family income. The report presents other state-level data on Alabama's K-college education, including demographic distribution across each educational level, participation and success in Advanced Placement, percentage of students taking high-level courses, school funding gaps, and high school and college graduation rates. On Alabama's reading test, white students scored significantly higher than African Americans and Latinos. Between 1992-98, Alabama 4th graders gained four points on the NAEP reading assessment. Between 1990-2000, 8th graders gained nine points on the NAEP 8th grade math assessment. Alabama's African American-white achievement gap fell 15th among states on the 1998 NAEP grade 4 reading assessment. Alabama had the sixth largest African American-white achievement gap on the 2000 NAEP grade 8 math assessment. Significantly larger numbers of white students participated and succeeded in Advanced Placement and graduated from high school than did minority group students. Almost one-quarter of Alabama's secondary classes in core subjects were taught by teachers lacking either a major or minor in that field. Alabama secondary school students took high-level courses at significantly lower rates than did students in the top states. Districts with the highest child poverty rates and highest minority enrollments received

Reproductions supplied by EDRS are the best that can be made

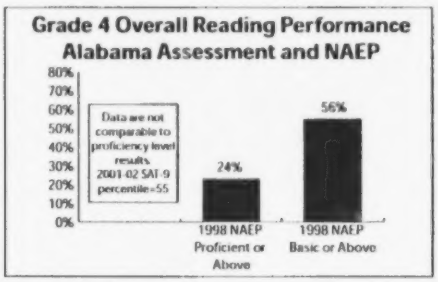
Achievement

Alabama Elementary Reading Achievement

Perhaps the most important task of elementary schools is to teach students to read well. Strong reading skills are the key to later success, both in school and in life.

The following charts compare your state's reading performance on the most recent administrations of the state assessment and the National Assessment of Educational Progress (NAEP). Under the No Child Left Behind (NCLB) legislation, every state must have a plan in place to ensure that all students are meeting the state's standard of proficiency by 2013-14. Results are reported below as the proportion of students reading at the "proficient" level, or the state-defined equivalent.

Are Alabama students proficient in reading?



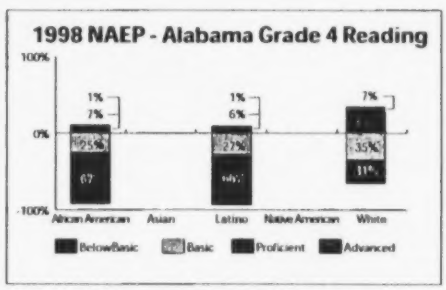
Alabama's 2001-2002 Stanford 9 (SAT-9) results show a mean scale score at the 55th percentile for 4th grade reading. Percentile scores, which measure the relative performance of students against other students, are not comparable to NAEP scores, which measure the performance of students against fixed standards of proficiency.

On the 1998 National Assessment of Educational Progress (NAEP), 56% of Alabama 4th graders performed at the basic level or above in reading, while only 24% performed at the proficient level.

Do results vary by group?

Because it's important to look underneath overall averages to see how different groups of students are performing, NCLB further requires states to report achievement data by group. In this way, states can draw attention to the students who need the most help. The charts below show the distance each group has to go in order to reach the proficient level on the state assessment and on NAEP.

2001-2002 Alabama SAT-9 Grade 4 Reading	Mean Percentile Score
African American	37
Asian	69
Latino	45
Native American	61
White	65



On Alabama's reading test, White 4th graders scored at the 65th percentile, while African American 4th graders scored at only the 37th percentile and Latino 4th graders scored at the 45th percentile.

Is Alabama's performance improving on NAEP?

Grade 4 Reading

	NAEP Scale Score		Change from 1992-1998	
	1992	1998	State Change	Biggest Gainer
African American	188	193	+5	+10 (RI)
Latino	190	190	0	+12 (CT)
White	218	222	+4	+10 (CT)
All	207	211	+4	+10 (CT)

Note: A difference of 10 points is roughly equivalent to a year's worth of learning

Between 1992 and 1998, Alabama 4th graders gained 4 points on the NAEP 4th grade reading assessment. The biggest state gain over that period was 10 points. From 1992-1998, the gap in Alabama between White and African American students on the NAEP 4th grade reading assessment narrowed by 1 point.

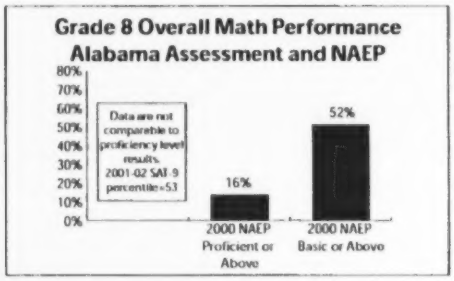
Achievement

Alabama Middle Grade Mathematics Achievement

To survive in our information society, all Americans need a solid foundation in mathematics. Middle schools play a particularly central role in assuring that students have not only mastered basic computation, but are also developing the mathematical thinking and problem-solving skills so important in the mathematics courses they will take in high school.

As we showed with reading on the previous page, the following charts compare students' mathematics performance on the most recent administrations of the state assessment and the National Assessment of Educational Progress (NAEP). NCLB legislation requires every state to have a plan in place to ensure that all students are meeting the state's standard of proficiency by 2013-14. For this reason, results are reported as the proportion of students at the "proficient" level, or the state-defined equivalent.

Are Alabama students proficient in mathematics?



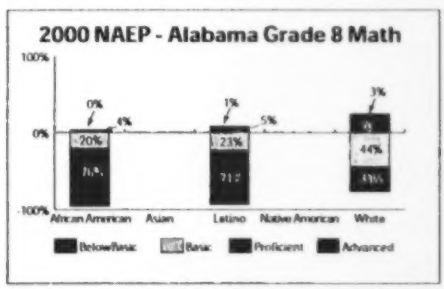
Alabama's 2001-2002 Stanford 9 (SAT-9) results show a mean scale score at the 53rd percentile for 8th grade math. Percentile scores, which measure the relative performance of students against other students, are not comparable to NAEP scores, which measure the performance of students against fixed standards of proficiency.

On the 2000 National Assessment of Educational Progress (NAEP), 52% of Alabama 8th graders performed at the basic level or above in math, while only 16% performed at the proficient level or above.

Do results vary by group?

Because it's important to look underneath overall averages to see how different groups of students are performing, NCLB further requires states to report achievement data by group. In this way, states can draw attention to the students who need the most help. The charts below show the distance each group has to go in order to reach the proficient level on the state assessment and on NAEP.

2001-2002 Alabama SAT-9 Grade 8 Math	Mean Percentile Score
African American	36
Asian	82
Latino	49
Native American	53
White	62



On Alabama's mathematics test, White 8th graders scored at the 62nd percentile, while African American 8th graders scored at only the 36th percentile and Latino 8th graders scored at the 49th percentile.

Is Alabama's performance improving on NAEP?

Grade 8 Mathematics

	NAEP Scale Score		Change from 1990-2000	
	1990	2000	State Change	Biggest Gainer
African American	234	239	+5	+23 (NC)
Latino	227	239	+12	+51 (NC)
White	263	275	+12	+29 (NC)
All	253	262	+9	+30 (NC)

Note: A difference of 10 points is roughly equivalent to a year's worth of learning

Between 1990 and 2000, Alabama 8th graders gained 9 points on the NAEP 8th grade math assessment. The biggest state gain over that period was 30 points. From 1990-2000, the gap between Alabama's White and African American students on the NAEP 8th grade math assessment widened by 7 points.

Achievement

How Does Alabama's Achievement Compare?

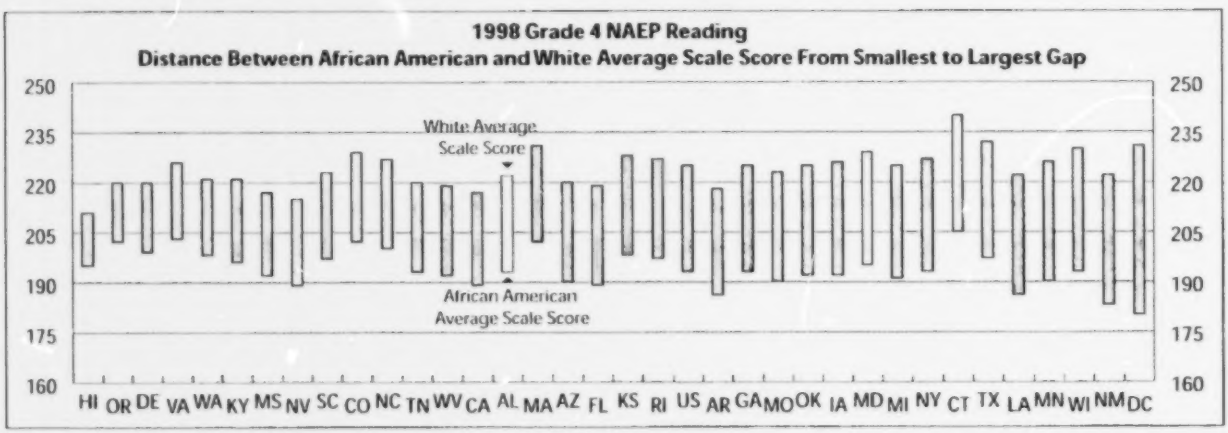
The win-win pattern states want to see is rising student achievement combined with narrowing gaps between student groups. On these pages we show where states are in meeting this twofold goal with respect to either African American, Latino or low-income students. For this report, we chose to feature the largest minority group in your state. While we focus here on one group's story, a complete picture of how your state is doing with all students can be found on Ed Watch Online at www.edtrust.org.

Readers should note that progress on one part of the goal does not necessarily mean progress on the other. For example, a state can have a narrow achievement gap between White and minority students, but the achievement levels of both groups are low. Likewise, minority achievement can be high relative to other states, but low in relation to White achievement in their own state, leaving a large gap. Most encouraging are the states that are seeing progress on both fronts.

NAEP Grade 4 Reading

How does Alabama's African American-White achievement gap compare?

The chart below shows the reading achievement gap between your state's African American and White fourth-graders on NAEP. The top of each bar represents the average scale score for White students and the bottom is that for African American students. States are ordered from the narrowest to the widest gap.



1998 Grade 4 NAEP Reading
Distance Between African American and White Average Scale Score From Smallest to Largest Gap

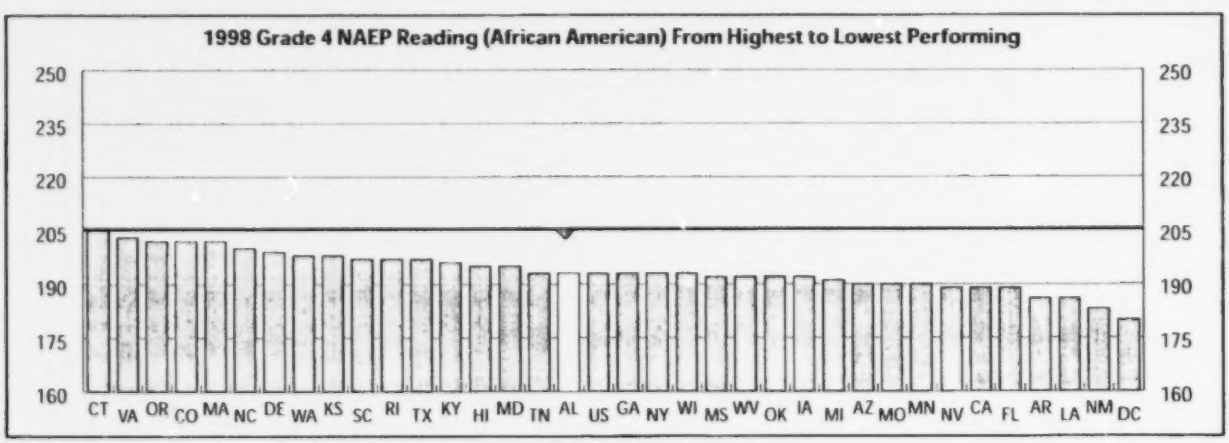
How do African American scores in Alabama compare?

Some states are far more successful teaching minority and low-income students than others. Indeed the achievement gap between students of the same group in high- and low-performing states is often larger than the gap between White and minority students within states. The following chart shows the average scale scores of African American fourth-graders in all states that participate in NAEP.



1998 Grade 4 NAEP Reading (African American) From Highest to Lowest Performing
250

Note: A difference of 10 points is roughly equivalent to one year's worth of learning.

Alabama's—along with MA's—African American-White achievement gap falls 15th among states on the 1998 NAEP grade 4 reading assessment. African American 4th graders in Alabama perform in the middle of the pack among states in NAEP reading.

Achievement

How Does Alabama's Achievement Compare?

NAEP Grade 8 Mathematics

How does Alabama's African American-White achievement gap compare?

As with reading, the chart below shows the mathematics achievement gap between your state's African American and White eighth-graders on NAEP. The top of each bar represents the average scale score for White students and the bottom is that for African American students. States are ordered from the narrowest to the widest gap.

Note: A difference of 10 points is roughly equivalent to one year's worth of learning.

Alabama—along with CA, LA, MO, RI, and TX—has the sixth largest African American-White achievement gap on the 2000 NAEP grade 8 math assessment. African American 8th graders in Alabama perform in the bottom quarter among states in NAEP math.

Attainment

High School and College Success

In earlier times, young people with poor reading and math skills could still succeed if they were willing to work hard. Now they need more. Not only do young people need to graduate from high school, but most will also need at least some postsecondary education or training.

Alabama's Student Demographics, 1998-99

Population and enrollments: These data offer a picture of the student population in your state. Comparing the demographic distribution of students across each educational level shows what happens to children as they journey through the education system. Significant differences should raise questions about equity.

	Population, age 5-24	Public K-12	Two Year Colleges	Four Year Colleges
African American	33%	36%	25%	26%
Asian	1%	1%	1%	2%
Latino	1%	1%	1%	2%
Native American	<0.5%	1%	1%	1%
White	65%	61%	71%	63%
Other	—	—	2%	6%
Total	100%	100%	100%	100%
Number	1,214,878	735,528	71,200	162,762

Participation and Success in Advanced Placement, 2000–2001

Composition of AP test takers: Students take Advanced Placement (AP) exams after completing year-long AP courses, typically among the highest level offered in high schools. In a system where all students have equal access to these opportunities, the percentage of test-takers by race and ethnicity would be proportional to their representation in public K-12 enrollment.

Who Takes AP Tests?

Example: Of all AP test-takers, this proportion were African Americans

	Public K-12 Enrollment	Calculus AB	English Language and Composition	Biology
African American	37%	15%	14%	8%
Asian	1%	8%	4%	7%
Latino	1%	1%	2%	2%
White	61%	76%	80%	83%
Total	100%	100%	100%	100%
Number	723,137	648	497	428

Success rates of AP test takers: A school system's responsibility does not end at enrolling students in AP courses. While AP test taking offers a picture of access to AP coursework, relative achievement on these exams is an important measure of student/teacher preparedness. Huge variability in the proportion of test takers that earn a 3 or greater should raise questions about the quality of instruction or educational resources provided in courses labeled Advanced Placement.

Who Scores a 3, 4 or 5?

Example: Of all African Americans who took the AP Calculus exam, this percent scored a 3, 4 or 5.

	Calculus AB	English Language and Composition	Biology
African American	18%	17%	35%
Asian	69%	*	77%
Latino	*	*	*
White	57%	70%	66%
Total	53%	62%	64%

*data are not reported where there were less than 25 test takers in the state

Attainment

High School and College Success

Who Makes it Through High School?

Alabama's 8th Graders vs. Diplomas

8th graders= 1995-96; diplomas= 2000

	Grade 8	Diploma
African American	21,813	12,562
Asian	377	363
Latino	314	223
Native American	548	465
White	36,862	24,185
Total	59,914	37,798

In order to determine equity in attainment rates, we compare regular diploma recipients with the number of 8th graders four years earlier. These show the flow of groups of students from middle school to high school graduation. Although these data do not track individual students from year to year, they should paint a fairly representative picture of who makes it through high school.

Who Makes It Through College?

Good jobs for young people today increasingly require at least some postsecondary training with the greatest advantage going to those with a B.A. or better. Over the last decade, college-going rates have gone up across the country. Below we offer several indicators of postsecondary trends in your state compared to the performance of the top states on each indicator.

Participation and Persistence in Postsecondary

	Alabama	Top States*
H.S. freshmen enrolling in any U.S. college w/in 4 years	35%	54%
1st year community college students returning their 2nd year	49%	63%
Freshmen at 4 year returning their sophomore year	74%	83%
First-time full-time freshmen completing a BA w/in 6 years	46%	61%

*Top States= median of top 5 performing states (Measuring Up 2002).

In order to determine equity in attainment rates, we've compared freshmen enrollments to bachelor's degrees four years later. We've also provided official data on the six-year graduation rates for students in your state's premier public university. Taken together, these should paint a fairly representative picture of who makes it through college.

6-Year Graduation Rates at State Flagship Campus, 2001

(1995-96 First-time, full-time freshmen)

	University of Alabama, Tuscaloosa
African American	50%
Asian	42%
Latino	33%
Native American	65%
White	60%
Total	59%

Alabama Freshmen vs. Degrees Awarded

*First-time full-time and part-time freshmen

Freshmen= 1996-97; Degrees= 2000

	Freshmen	Bachelors
African American	11,524	4,368
Asian	453	276
Latino	478	200
White	30,430	15,782
Other	989	667
Total	43,874	21,293

BEST COPY AVAILABLE

Opportunity

Opportunity Gaps

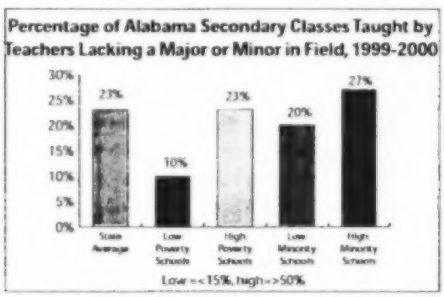
Differences in achievement and attainment between groups of students often have roots in differences in the availability of educational resources. To begin to understand achievement gaps among their students, states and districts should look at the distribution of qualified teachers, challenging curricula as well as funds.

Teacher Gaps

Who Teaches Whom?

Research is very clear: good teachers make good schools. Students who get several effective teachers in a row will soar no matter what their family backgrounds, while students who have even two ineffective teachers in a row rarely recover. The below chart shows one measure of the distribution of teacher talent in your state.

Under NCLB, every state and school district must make sure that low-income students receive their fair share of qualified and experienced teachers. Readers should investigate their state's plan for placing a highly qualified teacher in every classroom.



According to national survey data, almost a quarter of Alabama's secondary classes in core subjects are taught by teachers lacking either a major or minor in the field. Nationally students in high poverty, high minority schools tend to receive less than their fair share of teacher talent.

Challenging Curricula

Industry has joined colleges in the demand for individuals with high-level knowledge and skills. This means that all students need a rigorous curriculum in order to be prepared for success, whether they choose college or work. Yet too few students have the opportunity to gain these skills through rigorous math and science courses.

High Level Course-Taking, 1999-2000

Percentage of students who take high-level courses

Course-taking is an indicator of the amount of access students have to challenging subject matter and the essential skills it develops for life after high school. States should examine differences in access for different student groups.

	Alabama	Top States*
8th graders taking Algebra	13%	30%
9th-12th graders taking at least 1 upper-level math course	34%	57%
9th-12th graders taking at least 1 upper-level science course	23%	39%

*Top States = median of top 5 performing states (Measuring Up 2002)

BEST COPY AVAILABLE

Opportunity

Opportunity Gaps

Special student placements, 2000

School programs vary a great deal in their level of curriculum, expectations, and instruction. If there is equity in placements, the number of Latino students, for example, placed in gifted and talented programs and in special education should be proportional to Latinos enrolled in K-12. Although suspensions are not precisely an academic program, we include data about them because too often they represent a placement out of the system altogether.

Example for reading this chart: Of all public K-12 enrollments in your state, this proportion were African Americans.

	% Public K-12 Enrollment	% Gifted And Talented	% Special Education	% Suspensions
African American	36%	13%	45%	59%
Asian	1%	2%	<0.5%	<0.5%
Latino	1%	1%	1%	<0.5%
Native American	1%	1%	<0.5%	<0.5%
White	61%	84%	54%	40%
Total	100%	100%	100%	100%
Number	728,327	25,437	67,741	56,436

Investments

Funding Gaps: Education Dollars by District Poverty and Minority Enrollment, 1999-2000

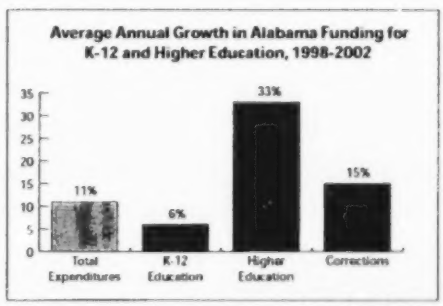
Most states spend considerably fewer state and local resources on the education of poor children than they do on educating more affluent children. The analyses below show the difference between resources available to the quarter of districts in the state with the most poor children and the quarter of districts with the fewest poor children.

In Alabama, districts with the highest child poverty rates have $991.14 fewer state and local dollars to spend per student compared with the lowest-poverty districts. That translates into a total $24,778.50 for a typical classroom of 25 students.

Districts with the highest minority enrollments have $720.01 fewer state and local dollars to spend per student compared with the lowest-minority districts. That translates into a total $18,000.25 for a typical classroom of 25 students.

State Funding for K-12 and Higher Education

It is important to examine changes in state education spending in the context of the overall budget as well as expenditures in other areas.



College Affordability Gaps, 2001

College costs often discourage students with limited means from seeking further education. States can lessen this problem by targeting their aid dollars to low-income students and by providing affordable colleges within the reach of low-income families.

	Alabama	Top States*
Amount state provides to low-income students for every $1 of federal Pell grants	$0.01	$1.08
Share of income that poorest families need to pay for tuition at lowest priced colleges	18%	8%

*Top States= median of top 5 performing states (Measuring Up 2002)

NAEP notes:

- NAEP data were not reported for race/ethnic groups where sample size is too small for reliable estimate.
- State change reported on pages 2 and 3 may not be statistically significant.
- NAEP cross-state tables (pages 4 and 5) are presented for either African Americans or Latinos, whichever is a greater proportion of 2000-2001 public K-12 enrollment. Where neither African American nor Latino students comprise at least 3% of the public K-12 enrollment in a state, we presented data for low-income students.

Cross-state table note (p. 4 & 5): For both the gap and minority achievement charts, states that share the same gap size or scale score are ordered alphabetically and share the same rank order in the text analysis. The nation is not included in cross state rank order.

Public K-12 enrollment note: These data may vary across different tables because we used data from consistent years within each table to provide the most accurate context.

Advanced Placement (AP) note: The number of non-respondents and Native Americans was subtracted from the total test-takers and public K-12 enrollment so the reported/known percentages would equal 100%. AP results for Native Americans are not reported as a separate category because we did not deem the data reliable.

Teacher gap data refer to secondary classes in the core subjects.

Rounding note: Due to rounding, the data where we present distributional percentages may not total to 100. We have indicated <0.5% where data would have rounded to zero.

Average annual growth in state funding per National Association of State Budget Officers (NASBO) data.

Education Watch Interactive State and National Data Site

Much of the data in this report—and many additional education indicators—is available on EdWatch Online—our interactive State and National Data Site, which allows users to compare student achievement and opportunity data across states and for the nation. To access the site, go to our website at www.edtrust.org.

Dispelling the Myth Online

While these reports focus on state-level data, Dispelling the Myth Online—another of our online data tools—allows users to mine school-level achievement data in almost every state. This easy-to-use, fully interactive Web site allows you to use school demographic and performance criteria of your choice to conduct rapid searches for high-performing or high-improving schools in nearly every state in the nation for all subjects and grade-levels where state assessment data is available in that state.

To access the full collection of Dispelling the Myth analyses, tools, and documentation, go to our website at www.edtrust.org.

The Education Trust was created to promote high academic achievement for all students at all levels, kindergarten through college. While we know that all institutions could better serve their students, our work focuses on the schools and colleges most often left behind in efforts to improve education: those serving Latino, African American, Native American and low-income students.
